BACKBOND

AGENT RISK RATINGS & INSURANCE

BRAND SYSTEM · SOURCE OF TRUTH

Brand Backbone

The single reference for what BackBond is, how it sounds, and how it looks. Everything we make derives from this document. Version 1.7 adds the rules for the scan stage: what we say, and do not say, before coverage exists.

VERSION 1.7
OCTOBER 2026
INTERNAL · CONFIDENTIAL
SUPERSEDES V1.6 (JUNE 2026)

GOVERNED BY FAL

Focus · Alignment · Linkage

What we are, in one sentence.

THE LOCKED FOCUS

BackBond rates and insures AI agents, so companies can put them to work with coverage behind every action they take.

THE CATEGORY, WHAT MAKES IT DIFFERENT

AI agent insurance. Every agent carries its own coverage.

Coverage lives at the agent and meters by the transaction, priced the way AI is billed: per agent, per run. That is the ownable mechanic. Traditional carriers price the company once a year; only we price the agent, by the action.

THE SCAN FOCUS NEW IN 1.7

BackBond finds what an agent does when nobody is attacking it, and shows the business what each one exposes it to.

This is the Focus for every asset about the Agent Exposure Scan, the 100 Scan and monitoring, for as long as coverage is not for sale. It is the first half of the company Focus (we rate) said in the customer's words. It never mentions insurance. A stranger reading a scan asset must recover this sentence; a stranger reading an investor asset must recover the locked Focus above. Both must be recognisably the same company.

One Focus, every register. The category and investor story, the buyer pitch and the partner hook are plain-English variants of one promise, and a stranger must recover the same Focus from any of them. The partner entry hook for coverage-stage assets stays "Guardrails lower the odds. We cover the loss."

THE FOCUS DOES NOT CLAIM

Not AI safety. Not an AI-governance platform. Not "responsible AI." Not agent evaluation. Not QA. Not a security tool. And not total risk transfer: coverage pays the covered loss up to the limit bought, it never removes all downside. **We rate, and we insure.** Drift toward any of these is a ship-blocking error.

02 · POSITIONING

The rating-and-insurance layer.

BackBond is the rating-and-insurance layer for AI agents. We score each agent's risk and put real capital behind the score, per agent, per run, so a company can put its agents to work and answer the one question that stalls every deal, "who is liable when this acts?", with a policy instead of a disclaimer.

THE CATEGORY WE ARE BUILDING

Agent Risk Ratings & Insurance. A third-party rating layer plus the capital behind it. Every prior platform shift created a rating layer that captured disproportionate value (FICO, S&P, SOC 2, BitSight). Agents are next, and there is one king position.

THE TWO COLUMNS NEW IN 1.7

WHAT A SECURITY REVIEW CHECKS	WHAT IT DOES NOT CHECK
Can an attacker make the agent do something it should not? Jailbreaks, prompt extraction, injection strings, harmful output. Necessary. The agents we scan usually pass it.	**What does the agent do when nobody is attacking it, and does it do the same thing twice?** Two customers treated differently. "Done" when nothing was done. A policy version that does not exist. A secret written into its own warning. A patient's words carried past. Each reply passes a guardrail on its own.

Every scan asset shows both columns from the same run. The first column is necessary; the agent proves it is not sufficient. This is how we are everything the security tools are not, without saying a word against them.

THE EVAL-VS-ACTION DEFENSE, LOCKED

The score's pillars will be attacked as "model eval with insurance bolted on." The answer is never a pillar comparison. Eval vendors ship a PDF; we put capital behind the score and pay claims on action-level losses in the logs. The differentiator is the bond, not the pillars.

THE NOT-QA DEFENSE, LOCKED 1.7

QA tests what the agent was scripted to do. We test what it wasn't. Never describe the scan as QA, testing, evaluation or red-teaming, and never list test counts as the value. The value is the exposure a business reader can feel, proven by the exchange.

WEDGE TODAY

The Agent Exposure Scan: a credible, independent finding an operator can act on and a procurement team can demand, with the transcript behind every finding.

MOAT TOMORROW

Loss data. Every scan and every monitored agent compounds a proprietary dataset of behaviour tied to outcomes. Late entrants cannot replicate it.

03 · THE NAME

One name, one system.

THE SYSTEM

Company: BackBond. The brand. Camel-case in running text, ratified October 2026 by use across every shipped asset. The logo wordmark is set in all-caps as a stylised lockup and does not govern running-text case.

Instrument: a bond, bonded. Evocative, as in "bonded and insured," not a literal surety bond.

Metric: the BackBond Score, 0 to 100. Always "BackBond Score," never a bare "Bond Score."

Conversation word: bondable, bondability.

PRODUCT NAMES NEW IN 1.7

Agent Exposure Scan	The full scan. "the scan" in running text after first use.
The 100 Scan	About 100 cases chosen for the agent's job, one agent, free, partner-code gated. Always "the 100 Scan." Not pilot, not starter, not Slim Scanner, not trial.
Monitoring	The listener inside the customer's environment. Working product name Agent Exposure Monitor. Present tense: it is sold, not "planned."
Coverage	The insurance policy. US coverage is "targeted for Q1 2027," never "planned" or "launching."
Findings Report	The document a scan produces. Not assessment, not audit, not certificate, not brief.

REJECTED NAMES, DO NOT REVIVE

Agent Risk Scan (crowded, reads GRC). Agent Exposure Assessment (weak). Slim Scanner. Pilot. QA. Agent Risk Assessment as a document title. Executive Risk and Partnership Report.

THE BANDS, WORDS FIRST, LETTERS RIDE ALONG

BAND	GRADE	RANGE	MEANING
Preferred	A	85 to 100	Bondable at the best rate.
Standard	B	70 to 84	Bondable.
Constrained	C	55 to 69	Bondable with conditions or at a higher rate.
Decline	D	below 55	Not bondable until remediated.

Never render bands as red/green traffic lights; that reads as an eval tool. Tonal copper only. Until the score is issued (see 04), bands appear only in brand and investor material as the system, never on a customer document.

The BackBond Score.

The score is the brand's signature instrument. It is a ratings sheet, not a dashboard: a single 0 to 100 number on a gauge, four weighted pillars that average to the headline, and a connected A to D band ladder. Reproduce it to spec on every surface where a score is shown.

BACKBOND SCORE · AGENT RISK RATING · SAMPLE

78/100

RATING BAND

Standard

PILLAR · WHAT IT MEASURES	SCORE
Governance Oversight · permissions · audit trail	88
Robustness Prompt injection · jailbreaks · failures	66
Customer treatment Disparate treatment · data sensitivity	84
Operations Monitoring · drift · incident response	74

Preferred	Standard	Constrained	Decline
A · 85+	B · 70 to 84	C · 55 to 69	D · below 55

The band sets whether, and at what rate, the agent is bondable. The same agent scores differently at different companies: the score reflects its data access, permissions and deployment context, not just the model. The pillar formerly labelled "Bias & Fairness" is labelled **Customer treatment** on any external surface; the internal name may stay in the dictionary.

SCORE STATUS NEW IN 1.7

No BackBond Score or band is issued on any customer document until coverage of connected actions is complete and the org has said so in writing. Until then every customer report carries "BackBond Score: not issued" with the reason. A number from partial coverage is prohibited; "N/A" is the only alternative. The sample above is illustrative and is labelled so wherever it appears. The old claim "deterministic 0 to 100 score, logs monitored monthly for drift" is retired until the score ships.

How we say it.

TAGLINE OF RECORD, COVERAGE-STAGE ASSETS

Guardrails lower the odds. We cover the loss.

The line we lead with everywhere coverage is for sale or being raised for. It is the "insure" half of the Focus, and no one who does not pay claims can say it. It does not appear on scan assets (see below).

SCAN-STAGE LINES NEW IN 1.7

QA tests what your agent was scripted to do. We test what it wasn't.

Guardrails answer "can it be attacked?" We answer "what does it do when nobody is attacking it?"

These carry scan assets: the one-pager, findings reports, partner material, the scan pages of the site. The first is the headline form; the second is the reframe form for a reader who owns security tooling. Use one per asset, not both as a pair in the same sentence.

THE INSURANCE SILENCE RULE NEW IN 1.7

Until coverage is for sale, scan assets do not mention insurance, coverage, bonds, policies, ratings or the BackBond Score. The one permitted forward reference is monitoring ("then monitoring as the agent changes"). Insurance direction is delivered by voice in a partner conversation, never in a scan document, because the document gets forwarded. The logo's descriptor "Agent Risk Ratings & Insurance" is accepted as a credential, not a pitch. When the US site needs the coverage date, it is "targeted for Q1 2027."

THE DIFFERENTIATOR, PROTECT VERBATIM

AI agent insurance: every agent carries its own coverage. Priced **per agent, per run**, the way AI is billed. Generic AI-insurance entrants and traditional carriers price entities once a year; we price the agent by the action. Keep "per agent, per run" intact wherever it appears.

THE LEDE FRAME

Lead where the market is: agents talking to customers. Then escalate to commitments, money and real actions. Do not open on "moving money" as if every agent wires funds on day one.

THE UNIVERSAL PAIN

"I have agents in production whose decisions can damage my company, my customers or my career, and I have no defensible measurement of their risk to show my board, my regulator or my insurer."

THE TAILWIND, FOOTNOTE LEVEL ONLY

From January 2026, ISO/Verisk endorsements let carriers exclude generative-AI exposure from standard policies. Real, but a supporting note, never the thesis.

06 · AUDIENCES

Four rooms, one Focus.

DISTRIBUTION PARTNERS 1.7

Agent platforms, cloud data platforms, pen-test firms, implementors, education companies whose students deploy agents, operating partners with portfolios. Win: the 100 Scan as added value they hand their own customers behind a partner code; a prospect for us on every code request. Voice: peer-to-peer, specific, no pitch. Hear the scan Focus.

SCAN BUYERS 1.7

The CEO or COO who owns the agent, and the CISO who checks our work. Win: a findings report the CEO feels in sixty seconds and the CISO cannot pick apart. Voice: the user's words, verbatim exchanges, business consequence. Hear the scan Focus and the two columns.

COVERAGE BUYERS

Roles with consequential agent exposure: CFO, COO, fiduciary. Win: a defensible number and a policy to show the board, regulator or insurer. Voice: capital-fluent, serious. Hear the locked Focus and the tagline. Not addressed in external material until coverage is for sale.

INVESTORS

AI-infra, fintech, insuretech theses. Win: conviction that this is the category king with a loss-data moat. Why now: agents are moving from pilots into production and the scan is already producing the data. Voice: thesis-grade. Hear the locked Focus, with the scan traction as proof.

NEAR-TERM PRIORITY, OCTOBER 2026

Distribution partners and scan buyers now, because every scan is data and every report is a reference. Investors in parallel on the scan traction. Coverage buyers from Q1 2027. The June sequence (investors first) is superseded.

LINKAGE, MANDATORY

Every audience hears different proof and different stakes, but a stranger must recover the matching Focus from each, and must recognise the scan assets and the coverage assets as one company: same logo, same type, same two-column argument, same verbatim-evidence habit. Quarterly: read the last ten assets across audiences; if a message has drifted into a smaller or different promise, retire it.

07 · COMPETITIVE

Beat each one on a different axis.

THE ALTERNATIVE	OUR STRUCTURAL AXIS
Security tooling and guardrails 1.7	The other column. They answer "can it be attacked?"; we answer "what does it do when nobody is attacking it?" We never say they are unnecessary; we show the agent that passed them and still did the five things on the right. Never name a vendor.
AI eval and red-team startups	Business-first findings with the exchange behind each, ranked by consequence, not a benchmark PDF. Later: action-level rating plus capital. We rate actions and pay the claim.
QA and test automation	They test what the agent was scripted to do. We test what it wasn't. Never adopt their vocabulary (test suite, coverage percentage, pass rate) as our value.
Vendor self-rating	Third-party plus capital-backed. Their score is marketing; ours is bondable.
In-house GRC rubrics	Capital. A rubric produces a number, not a hedge. The board cannot post a spreadsheet against an incident.
Hyperscaler bundling	Independence plus liability. They cannot credibly rate agents on their own stack, and will not underwrite. Watch for "agent trust" launches; escalate.
Big-four consultancies	Outcomes vs. hours. They sell governance hours; we sell rated outcomes with capital behind them.
Doing nothing	Cost asymmetry. Waiting compounds; a scanned, monitored, eventually insured deployment is fixed.

> **THE CARRIER RULE, LOAD-BEARING**
>
> Insurance carriers are partners, not enemies: future reinsurance and distribution. Never write competitive content against a named carrier. Never claim we "replace" carrier capacity; we provide the methodology and primary layer, they provide the backstop. Any external asset that names a specific carrier escalates to Eric before shipping. Violating this is a fireable mistake.

Navy is the institution. Copper is the exposure, and the capital that answers it.

Ink Navy #0B1A38
Base, all primary text, dark fields, the score card.

Copper on dark #D58E5C
The accent on navy: the score, the active band, the payout.

Copper on white #BD6A34
Same accent, value-tuned for white: the wordmark rule, the accent word, finding marks.

Slate #535E77
Captions, labels, footnotes. The print-legible floor for small text on white.

THE COPPER LAW, EXTENDED

REVISED IN 1.7

Copper marks **capital, payout, or exposure**, nothing else. Exposure is what capital answers, so the two sides of the same fact share one colour. If you cannot name the capital or exposure reason a thing is copper, it is navy.

Approved moments, coverage assets: the wordmark rule, the headline accent word (bonded, bondable), the score, the active band, a payout figure.

Approved moments, scan assets: the second line of a findings headline (what the agent did anyway), the "what it does not check" label, the finding numerals 01 to 05, the Exposure label in a finding panel, the blast-radius perimeter in the exposure diagram. The security column, the passed counts and all body text stay navy or slate.

Never as decoration, never a gradient, never on bullets or rules for their own sake. Two-tone by background: #D58E5C on navy, #BD6A34 on white. Bands stay tonal, never traffic-light.

THE BLAST-RADIUS DIAGRAM

1.7

Concentric rings: the employee mistake as the centre dot in navy, the agent's reach as the copper perimeter. Approved for teach slides and the reframe page. Draw it in the system, no illustration style.

PRINT DISCIPLINE

Light on-screen greys go faint in ink. Secondary text on white never goes lighter than #535E77; the score card's light-on-navy text is print-safe as is.

09 · TYPE & MARK

The mark is a serif. The collateral is a system.

BACKBOND
AGENT RISK RATINGS & INSURANCE

THE LOGO

Institutional condensed serif wordmark, a 1pt copper underwriting rule, and the descriptor AGENT RISK RATINGS & INSURANCE. Clear space is the cap-height of "B". Light version on light fields, dark on dark. Do not recolor the rule, add shadow or stretch. Always the packaged file; setting the word BackBond in display type is reconstructing the logo and is prohibited. Concept-stage raster; vectorise before scaled production.

COLLATERAL TYPOGRAPHY

Display	Archivo ExtraBold (800) for headlines and the score; Archivo Bold (700) for titles. The families ship separately: request "Archivo" for 700 and "Archivo ExtraBold" for 800.
Body	Inter Regular, Medium, Bold. All running copy. Request "Inter Medium" separately for 500.
Data	IBM Plex Mono Medium. Figures, scores, ranges, labels, run records, hashes. No plain "IBM Plex Mono" ships.

TWO TYPE ROLES, NEVER MIXED

The serif belongs to the logo only, the institutional signature. Collateral (one-pagers, reports, decks, web) is set in Archivo, Inter and IBM Plex Mono. The score card is always a ratings sheet: figures in mono, score on a gauge, bands as one A to D ladder.

PAGE DISCIPLINE 1.7

On every page of every document, including continuation and signature pages: the packaged logo top left, a 1.2pt navy header rule beneath, and clear white space between that rule and the first line of body text. A mono footer with the document name and "Page n of N". Letter for US customer documents, A4 for internal.

Operator-grade, or nothing.

CHARACTERISTICS

- **Operator-grade.** Reads like a Chief Risk Officer wrote it, not a content marketer.
- **Specific.** Numbers, names, examples, only when sourced. Vague language is banned.
- **Confident without bravado.** State truth as truth; no "we believe," no bragging.
- **Risk-fluent.** Earn the insurance vocabulary; don't borrow it.
- **Sparse.** No padding, no metaphor that doesn't carry weight.
- **In the user's words** .7. On scan assets, describe what the agent did as its user experienced it. "It said done when nothing was done," not "incorrect completion assertion."
- **Verbatim or nothing** .7. Anything in quotation marks attributed to an agent is copied from the record. Trim with an ellipsis; never paraphrase inside quotes; bold the phrase that carries the finding.

USE LIBERALLY

actuarial · bonded · underwritten · capital-backed · exposure · claims-paid · portfolio · reserves · primary layer · per agent, per run · procurement requirement · the exchange · the record · what it exposes the business to

THE JOURNALIST TEST

Before shipping: would a reporter quote this sentence, or skip it? If every sentence is skippable, the asset is generic. Strengthen the strongest line until it could be the headline.

THE ANTI-TELL CHECKLIST

- No em dashes. A spaced hyphen or a comma; the spaced hyphen is the house dash.
- No "This isn't X. It's Y." constructions. .7
- No rule-of-three padding where two items do.
- No "in today's [adjective] landscape / era."
- No empowering, unlocking, seamless, game-changing, revolutionary, paradigm, leverage, robust, critical, significant.
- No "trust" as an undefined noun; no "responsible AI" without a measurable claim; no "security platform."
- No overclaim: not "surety," not "guarantee," not "without the downside." We pay the covered loss up to the limit.
- No framework names in customer copy (FAL, Challenger, MEDDPICC). .7
- No tester vocabulary on a customer page: oracle, canary, marker, adjudication, family, harness, by construction. .7
- No hedge before the evidence. Scope, limits and counter-evidence belong next to the finding or on the last page, never in the headline. .7
- No paragraph a competitor could publish verbatim.

What's true, and what's locked.

VERIFIED PROOF POINTS, OCTOBER 2026

2,361 executable cases across 79 families	The scanner library per the October 2026 dictionary; executable count, not registered. Dated whenever quoted externally. Revalidate against the current dictionary before every external use.
Per-run executed counts	A customer document cites what that run executed (for example 2,390 cases, 124 families, 3,931 exchanges), recomputed from the transcript, never the library figure in its place and never a registry count that includes aliases or not-applicable rows.
Three live scans, three findings sets	A voice-platform agent, a public learning assistant and a patient-onboarding agent, October 2026. Findings quotable as described in their reports; customers named only with permission.
$85B+ annualized quoted premiums, 39 markets	bolttech, public. The founders' prior company. Revalidate annually.
Ari Katz & Eric Gewirtzman	Founders of Bolt (now bolttech). Insurance operators.

PROHIBITED, STALE OR UNPROVEN

"1,180+ probes across 27 risk dimensions" (historical target, never executable inventory). "Deterministic 0 to 100 score, monitored monthly" (retired until the score ships). Any BackBond Score or band on a customer document. Synthetic or fixture-fed results presented as live customer evidence. "Pilot." "Planned" for monitoring or "launching" for coverage. IFA or BEA branding, the old slogan, old probe counts, old score examples.

CLAIM STATES, EVERY MATERIAL CLAIM

Verified: current named source. **Qualified**: true only with a visible date, scope or limit, kept next to the claim. **Illustrative**: labelled at the point of use ("synthetic key, supplied by the test"). **Unverified**: not in external copy. **Prohibited**: the list to the left. Two sources that disagree: use the one that recomputes from the record and surface the conflict; never pick the more marketable number.

FAL, THE SUPREME LAW, RUN ON EVERY ASSET

Focus: could a stranger recover the matching Focus (locked or scan) from this alone? **Alignment**: does any line imply a different promise, or a product that is not for sale yet? **Linkage**: does it share a phrase, proof or visual signal with the rest of the system? If any fails, it does not ship.

LOCKED

The Focus and the scan Focus · the eval-vs-action and not-QA defenses · the naming and product-name system · the score status rule · the insurance silence rule · the visual system and extended Copper Law · the Carrier Rule.

ESCALATE TO ERIC

Any Focus change · naming a competitor, carrier or customer · an unverified proof point · a public benchmark we haven't published · issuing a score · any insurance mention in a scan asset · a safety-pattern finding in a regulated or healthcare context before it ships.

RATIFIED IN 1.7

Running-text case "BackBond" (camel-case). Copper for exposure. The blast-radius diagram. Open: none.

12 · DOCUMENTS NEW IN 1.7

One thing per document.

A BackBond document is one kind of thing and says so on its first page. A report does not carry a pitch; an email does not carry the evidence; a one-pager does not carry a run record. When two jobs need doing, two documents do them, and the email names which is which.

DOCUMENT	WHAT IT IS	WHAT NEVER GOES IN IT
Findings Report	What one agent did across its test conversations, with the exchanges that matter quoted verbatim. Page 1: headline (passed X; also did Y), the two columns, a provenance band. Then findings in full, each with scenario, verbatim reply, Finding, Exposure and one grey counter-evidence line. Last page: next step, what it does not establish, questions, run record with hashes. Sized by surviving findings (two pages for the 100 Scan; three to six for a full scan). Governed by the backbond-findings-report skill.	Proposal, CTA box, founders bar, pricing, insurance language, a score, tester vocabulary, hedges on page 1, a security finding as the lead when a business finding is available.
Cover email	What the attachment is, what to read first, what it means for the reader, the proposal and the ask. Ten to twenty lines. The founders' credential in one sentence. Signed by the relationship owner.	Findings restated beyond four headline facts; evidence; hedges; the word pilot.
One-pager	The scan for a forward: the reframe headline, how it works in three steps, two illustrative findings labelled as such, what the 100 Scan looks at, a free-scan CTA. Contact is info@backbond.ai, never a named person.	Insurance, scores, bands, real customer findings without permission, a named contact.
Evidence pack	For the security reader, after the report: every exchange, family-level results, labels as recorded, known defects stated, hashes. Sent only once its tooling defects are fixed.	Marketing of any kind; a score; anything the report contradicts.
Partner and investor decks	Coverage-stage material. Locked Focus, tagline, the score card as the system, the two columns as the teach slide, blast-radius diagram.	Scan customer names without permission; carrier names; unverified counts.

ILLUSTRATIVE FINDINGS

A finding written to illustrate a scenario family, rather than taken from a customer run, is labelled "Illustrative finding" at the point of use and is drawn from the scanner dictionary's real families. If anyone asks whose agent it was, the answer is "a scenario from our library." Real findings replace illustrative ones as soon as a customer permits.

APPENDIX A · COLOR TOKENS

The full palette.

The core three carry the brand; the support tokens keep documents consistent. The extended Copper Law governs: copper marks capital, payout or exposure, never decoration; two-tone by background.

TOKEN	HEX	USE
Ink Navy	#0B1A38	Base; all primary text; dark fields; the score card; Permit cells in a run strip
Copper (on dark)	#D58E5C	Accent on navy: the score, the active band, a payout; links on dark
Copper Ink (on white)	#BD6A34	Same accent on white: the wordmark rule, the headline accent word, finding numerals and labels, the Exposure label
Navy-Gray (body)	#36425C	Body copy on white in brand and deck material
Slate (secondary)	#535E77	Eyebrows, captions, footnotes, the security column, counter-evidence lines. The print-legible floor on white
Held (green-slate)	#2F5D50	Optional: the passed-column heading in a findings report. Never a traffic light; never paired with red
Warm Paper	#FCFBF8	Document field for customer reports and the one-pager
Report Rule	#D9D6CE	Hairlines and panel borders on Warm Paper
Card Muted	#8A9BC0	Secondary text on navy
Card Line	#26375C	Dividers on navy
Tint	#F5F7FB	Soft panels on white in brand and deck material
Tint Line	#DBE1EE	Panel borders on white
Rule	#E3E7EE	Hairlines on white
Paper	#FFFFFF	Document field for brand and deck material

DO

Spend the accent once: copper = capital, payout, exposure. Keep navy near-black and let copper do the work. Sentence-case headlines; uppercase only for tracked eyebrows and mono labels. Flat colour fields; tonal bands within the system.

DON'T

No gradients or blue-purple mesh: the AI-startup tell. No copper as decoration on headers, bullets or rules. No mid-blue: it reads generic-corporate. No traffic-light bands. No red for failure. No Archivo for body text.

APPENDIX B · TYPE & LOGO

Build specifications.

TYPE RAMP

ROLE	FACE / WEIGHT	SIZE / TRACKING	CASE / LEADING
Display	Archivo 800	`33 / -.02em`	Sentence · 1.08
Report headline	Archivo 700	`23pt / -.012em`	Sentence, two lines, second in copper · 1.08
Numeral (score)	Archivo 800	`46 / -.01em`	Tabular · 0.9
Finding numeral	Archivo 700	`15pt / -.02em`	Copper · 1.0
Title	Archivo 700	`18 / -.01em`	Sentence · 1.2
Subhead	Inter 700	`15`	Sentence · 1.35
Body	Inter 400	`13 (brand) · 9pt (report)`	Sentence · 1.55 / 1.42
Eyebrow	Inter 700 or IBM Plex Mono 500	`10 / +.13em`	Uppercase · 1.0
Caption	Inter 400 to 500	`9 to 10`	Sentence · 1.45
Data, labels, hashes	IBM Plex Mono 500	`6.2 to 12`	Figures, tables, run records; hashes break-all

Brand sizes are px at one-pager print scale. Report sizes are pt on Letter. For slides and web, multiply display sizes about 1.5 to 2x and set body at 16 to 18px; keep weights, tracking and case unchanged. The wordmark is the logo asset (institutional serif), not set in Archivo.

LOGO PRODUCTION SPEC

- Clear space: at least the cap-height of the "B" on all sides; keep all other elements out of that zone.
- Minimum size: 80px wide digital, 25mm wide print. In a document header: 0.36 to 0.38in high on Letter.
- Background pairing: light version on light fields, dark version on dark. Never light-on-light or dark-on-dark.
- Do not recolor the rule or descriptor, add a shadow, or stretch or condense the wordmark. Do not set the name in display type as a substitute.
- Descriptor is set in the wordmark's serif (Frank Ruhl Libre, large-and-small caps); match it when vectorising. Current asset is concept-stage raster.
- Deliver a vector master (.ai / .svg / .eps / .pdf) plus transparent PNG at 2x and 3x.

APPENDIX C · CHANGE LOG

What changed from v1.6.

SECTION	CHANGE	WHY
01 Focus	Added the scan Focus. Added "not QA" and "not a security tool" to what the Focus does not claim.	Scan assets were recovering an insurance promise we cannot sell yet.
02 Positioning	Added the two columns and the not-QA defense. Wedge today is the scan.	Three live scans proved the argument; it is now the lead for every scan asset.
03 Name	Ratified "BackBond". Added product names: Agent Exposure Scan, the 100 Scan, monitoring, coverage, Findings Report. Added rejected names.	Three names for the same free scan appeared in one week.
04 Rating	Added the score status rule (not issued; N/A). Relabelled Bias & Fairness as Customer treatment externally. Retired the deterministic-score claim.	Coverage of connected actions is incomplete; the pillar label is responsible-AI vocabulary.
05 Message	Tagline scoped to coverage-stage assets. Added the scan-stage lines and the insurance silence rule. "Targeted for Q1 2027."	Scan documents get forwarded; the pitch belongs in the conversation.
06 Audiences	Four rooms: distribution partners and scan buyers added; priority updated.	Partner-code distribution is the live channel.
07 Competitive	Added security tooling and QA rows; eval row rewritten for the scan stage.	The reader we meet owns guardrails already.
08 Color	Copper Law extended to exposure. Blast-radius diagram approved. Held green-slate token added.	The August exceptions performed; folded in per Eric's direction.
09 Type & mark	Page discipline: header rule, clear white space, mono footer. Logo-reconstruction prohibition made explicit.	Standing rule set 14 Oct 2026.
10 Voice	In the user's words; verbatim or nothing; spaced hyphen as house dash; new banned constructions and tester vocabulary; hedges off page 1.	Report rewrites of October.
11 Proof	Proof points replaced with dated October figures; 1,180+ moved to prohibited; claim states made explicit; locked and escalate lists extended; open items closed.	Counts disagreed across two reports for the same run.
12 Documents	New section: one thing per document; the five document types and what never goes in each; illustrative-finding rule.	A report that carried the pitch read as a brochure.
Appendices	Report tokens and type sizes added. This change log added.	Two surfaces, one system.

Companion skills: backbond-brand and backbond-sales-marketing (BackBond Skills, to be re-released as v1.1 against this document) and backbond-findings-report (v2026-10-18). Where a skill and this document differ, this document wins on identity and claims; the findings-report skill wins on report structure and finding selection.
