BACKBOND
AGENT RISK RATINGS & INSURANCE

CONTINUOUSLY CURRENT EVIDENCE

The agent changes. The evidence has to keep up.

Model, prompt, tool, permission, or control changes can make yesterday's result stale.

THE OPERATING QUESTION

What evidence still describes the agent running now?

Scan before deployment. Watch for production drift. Rescan when the agent changes.

BACKBOND
AGENT RISK RATINGS & INSURANCE

ACTIVE SCANNER

Three ways to establish the pre-deployment baseline.

AVAILABLE NOW

Direct API orchestration

Band submits versioned artifacts, eval results, governance attestations, and tool inventory to the Scanner contract.

CONTROLLED PILOT

Reachable staging endpoint

BackBond probes a Band-controlled test endpoint using the shipped live-probe mode. Endpoint access and test scope are agreed for the pilot.

AVAILABLE NOW

Offline replay / evidence bundle

Band runs or exports a pinned evidence package for deterministic replay. BackBond scores the supplied evidence without production access.

Held: the open-source CI/CD plugin is not externally published until probe protection is live.

BACKBOND
AGENT RISK RATINGS & INSURANCE

CI/CD INTEGRATION

A scan becomes a release check and a rescan trigger.

1

TRIGGER

Pull request, release candidate, or declared material change

2

BAND SUPPLIES

Versioned agent artifacts, endpoint or replay bundle, attestations, tool inventory

3

BACKBOND RUNS

Pinned Scanner, corpus, models, seeds, probes, evidence capture

4

RESULT

Score, subscores, confidence, evidence refs, versions, seed

5

RELEASE ACTION

Band applies its policy: pass, flag for review, or block

RESCAN ON CHANGE

Model, prompt, tools, permissions, control posture, or production drift.

The CI/CD plugin is held from external publication. Pilot orchestration can use the supported Scanner modes above.

BACKBOND
AGENT RISK RATINGS & INSURANCE

PASSIVE MONITOR / PROVISIONAL

A listener path for Band's remote agents.

Band documents remote and platform runtimes. The target agent type is still unconfirmed.

RECOMMENDED

Vendor-side collector

Band documents real-time room and message events through its SDK and WebSocket channels.

FALLBACK

Scheduled evidence bundle

If Band can provide it, use a signed, version-bound bundle on a schedule or material change.

CONFIRM WITH BAND

Which runtime and events?

Remote or platform? Which events expose tool calls and outcomes, and bind to the deployed version?

BackBond state: collector and evidence storage shipped; determination, metering, and rescan enforcement remain incomplete.
